

Hair restoration procedures in the past required major surgery, leaving a large linear scar across the back of the head. Recovery time was slow and uncomfortable. Newer automated and robot technologies have been developed but are still slow and inefficient.

SmartGraft is a smarter option for both men and women searching for a permanent solution to hair loss.

SmartGraft's revolutionary technology delivers better results in less time than any other currently available FUE method.

FOR YOU, THAT MEANS:

Minimal Recovery Time

Faster healing time with virtually no discomfort or interruption of lifestyle

Advanced harvesting

Less time in the doctor's chair, in and out in a day

Not gender specific

Ideal for both men and women of all hair types

Natural results

Hair grows naturally and complete in a period between 9 months to a year

More transplant options

Solve permanent hair loss in other areas (body & facial hair, eyebrows)

Get natural,
permanent results
that make you
look and feel
younger.

It's time
to get smart
about
hair loss.

SmartGraft™

What's the SmartGraft procedure like?

Using only local anesthetic, we use the SmartGraft device to gently extract individual micro hair grafts from the back of your head. These grafts may then be implanted into the balding area to regrow thick, healthy, natural hair

What kind of results should I expect?

Your new hair grafts will grow in the areas that are thinning, creating a fuller head of hair all around your head. Since it's your real hair, it looks completely natural, restoring a more youthful appearance and confidence levels.

Is the SmartGraft procedure painful?

No. It's a one-day, in-office procedure rather than a complicated surgery. All you need is a simple local anesthetic.

What is the recovery period like?

The minimally invasive SmartGraft procedure heals quickly and is not painful. You can return to work in a couple of days, with very few activity restrictions after the procedure.

Why should I consider SmartGraft?

SmartGraft is superior to other FUE and robotic hair restoration devices because:

- It gives you better results in less time, and it's ideal for both men and women.
- It incorporates the most critical component of hair transplantation -- the human artistry required for proper, natural looking, facial framing.
- It allows for harvesting grafts from other parts of the body, such as chest, back and face, for better results.

Will there be a linear scar?

You can wear any hairstyle you like (long or short) without a visible linear scar.

Is SmartGraft suitable for both men and women?

Yes. Because SmartGraft is a minimally invasive procedure, it is a viable option for both men and women looking to restore their own real hair.

Do I have to get a buzz cut to have a SmartGraft procedure?

No. If your hair is long enough, we can harvest hair grafts using the SmartGraft by shaving small areas that can be covered by your longer hair.

Am I a good candidate for a procedure using SmartGraft?

The majority of hair loss patients are candidates for the SmartGraft procedure, particularly those who would like to wear very short haircuts, want the least amount of activity restriction after their procedure, or have had a prior strip procedure and need a scar camouflage.

The best way to determine this is through a free consultation. Contact us to set one up today! SmartGraft is the smart choice for hair restoration.
